

Dear Reader!

We would like to present you a new issue of Electronic Journal of the Faculty of Economics of Lomonosov Moscow State University.

The issue contains articles on the most actual problems of economic life. It presents articles on such topics as the features of the formation of the digital economy in our country, the importance of the behavioral economy for the development of government regulation measures, the importance of the experience of indicative planning in France in the context of structural transformation of Russian economy, renewed concept of poverty in Russia, the effective use of working time and harm of workaholism.

The article "Electronic Document Interchange in Russia: Barriers and Prospects of Development" analyzes one of the digital technologies, which is designed to increase the efficiency of business-processes by saving two key resources: labor and time. The author concludes that Despite the significant advantages that are assumed by the use of electronic document management systems, the process of spreading this technology is slowed for some reasons, such as gaps in the law and psychological barriers of employees.

The article "Behavioral Aspects of Regulator Decisions" systematizes the main manifestations of limited rationality which can influence decision-making by regulators. An attempt is made to answer two questions: is there a need and possibility to take into account the limited rationality of civil servants in modeling the actions of the regulator and are special practical measures required to correct for the identified effects?

The article "The Experience of Indicative Planning in France in the Context of Structural Transformation of Russian Economy" analyzes the experience of applying planned methods in the French economy and its value for Russia, facing structural transformation on the basis of re-industrialization, and technological modernization. Author concludes that the implementation of different kinds of planning as an instrument of industrial policy definitely rises on the agenda.

It has become a good tradition to publish on the pages of the journal the works of young scientists trained under the guidance of well-known Russian thinkers. This issue presents a set of articles as a the result of the work of the master's seminar on modern economic theory of the West. They analyze the work of the most famous economists leading in the citation ratings: Olivier Blanchard, Robert Joseph Barro, Finn Kydland and Daron Asemoglu. Each of these authors represents one of the trends of modern economics. So, O. Blanchard is the representative of neoclassical and keynesian synthesis in macroeconomics. R. Barro and F. Kydland are developing a liberal concept of «rational expectations» D. Asemoglu heads modern neo-institutionalism.

This issue also contains an articles by participants in the competition of scientific student works organized by the Department of Philosophy and Methodology of Economics of the Faculty of Economics of Moscow State University in the fall of 2017. The author of one of the articles reflects on the limitations of existing concepts of poverty and the need to take into account the influence of the social sphere on the real level of the well-being of the population. In another article, The

authors construct the theoretical model of a representative single labor choice, from which, without loss of generality, it follows that systematic overwork does not lead to an increase in aggregate output in comparison with the normal working regime.

We are glad to cooperate and looking forward to your publications and feed-back about the articles published in this issue.
